C.A.S.T

CASINO AUTOMATED SECURE TRANSPORT

Lamson has developed a new method for the transfers of drop boxes between gaming pit areas and cash cages. The patented, ultra secure carrier acts just like an industry standard drop box. The only difference is that it moves, unassisted, at a speed of nearly twenty-five feet per second.

The carrier has all the same security features of your current drop box including dual key locks and locking drop slot. Authorised use of the system is assured through the integration of a programmable access control system.

In addition to moving the patented “drop box” style carriers, the system also can be used for the transfer of other secure item such as cards, chips, markers and other secure documents.
