PRODUCT PROFILE

NAME OF PRODUCT: **AUSSIE TAC NOTE READER**

PRODUCT CODE: ATAC (NR) **AUSSIE TAC NOTE READER**

FUNCTIONALITY

The Changemaster Compact is an Aussie TAC with a **Note Reader** designed to enhance and facilitate cash management operations by

- Providing change in exchange of notes via a **Note Reader**
- Reducing cash register holdings to a minimum.
- Controlled access to cash and vault door by electronic time-delay.

PURPOSE OF MACHINE

Prevention of:

- Armed Robbery
- Internal theft
- Inefficient cash management

FEATURES AND BENEFITS

- Designed and manufactured in Australia, better availability of parts and lower lead-time.
- Vending, only after notes inserted into **note reader** for preventing internal shrinkage and discouraging armed robbery.
- Tubes given a predetermined value to be exchanged for notes. Machine will always balance.
- Time delay on the door for preventing and discouraging armed robbery.
- Posting slot, to assist in clearing the till and making drops.
- Robotic dispensing mechanism, hence no more jamming of tubes and less servicing costs.
- Power supply outside the unit, no more drilling if power supply is faulty. Quicker to service.
- Easy to load, no more holes, hence less tube damage and jams.
- Tubes live in slotted columns, hence easy to count and no need to do "Dumping".
- Front panel door opens under time-delay for easy to fill, no need to dip the machine.
- Low service and maintenance requirements, ultimate ongoing cost savings.
- Dimensions the same as TACC11A.
- Serial Port, possible for optional software for remote servicing in the future.
- Increased treasury capacity for less filling.
- Simply an exchange machine, bill acceptor allows you to dispense your credit.
- Display shows you selections and credit availability, no need to open door or dip
- RETROFIT This Note Reader function is available as a RETROFIT on all TACC11A models post'94.

APPLICATION

The Aussie TAC is suited to any business that needs to hold a considerable amount of **change** and float top up money. The coins, notes, vouchers or similar items can be loaded into tubes and then placed into the columns in the machine. These tubes can be vended when notes are inserted in the Bill Acceptor equivalent to the value of the tube to be dispensed.
