PRODUCT PROFILE

NAME OF PRODUCT: *TANK DEPOSIT SAFE* – “Money in the bank”

FUNCTIONALITY:

Tank Security’s smart safes are the latest development in efficient cash management , combining all the features of a two key with an electronic bank note acceptor to verify actual drops. It is also a facility for all transaction details of drops and deposits via a comprehensive reporting system. The notes are kept in a container and cannot be opened by staff, which reduces cash counting and handling of notes by the operator. These funds are electronically transmitted via secure communication lines directly into your bank account.

PURPOSE OF MACHINE:

Prevention of:

- Double counting of cash.
- Exposing large amounts of cash on the premises when preparing for banking.
- Armed Robbery.
- Internal theft.
- Inefficient cash management.
- Same day value of funds stored in the safe.

FEATURES AND BENEFITS:

- This safe can connect to any financial institution
- Designed and manufactured in Australia, better availability of parts and lower lead-time.
- Easy to use keypad for restricted pin access for identifying users and registers.
- The note acceptor identifies actual cash; hence money is not in the REGISTER.
- Money does not live in the register so there is less chance of armed robbery or internal shrinkage.
- Verification and balances are instant and real for internal auditing purposes.
- Can be assessed remotely for head office control.
- Detailed reports of operator, register, time and date, cash box and notes.
- Posting chutes for bad notes and cheques.
- Controlled access to cash and vault doors by two key system or time delay.
- Thermal printer for receipts and reporting purposes.
- Low service and maintenance requirements; ultimate on going cost savings.
- Serial port available with every unit.

APPLICATION:

The clearance safe is suited to any business that needs to disperse high volumes of cash from the register to a holding safe. By having the clearance safe near the register an operator can clear high value notes as he/she receive them into the note reader and either get a receipt for the money.

The money can then automatically and electronically transferred to your account.

Excess funds that are not accepted by the note reader can be posted into the safe via a posting slot after having manually entered the details of the drop via the keypad.
