LOSS PREVENTION SPECIALISTS

ACRYLIC GUARD

Radio-Frequency Article Surveillance System

These new antennas are manufactured here in Australia using heavy duty acrylic, this new design captures everyone's eyes when activated, lighting up with LED colored lights and alerting everyone of the theft taking place.

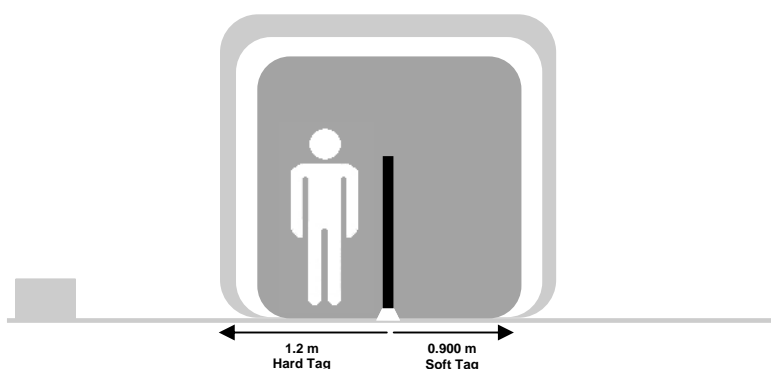

Acrylic Guard offers the ultimate solution in compact designer elegance suited to any shop front. Lamson's latest Acrylic Guard Antennas enables you the option of having it permanently illuminated in a choice of colours. Another option is having a sticker or sock with your company logo or sponsored supplier details placed on or over the Antenna that would then be illuminated.

Advantages:

- ◆ This digital system with self-tuning capability tests the environment and adapts to cope with externally electrical noise which could cause false alarms.
- ◆ With its patented comparative tag signal recognition software the Acrylic Guard system provides a high level of operation reliability, making it much less prone to the outside disturbances that's its historical predecessors suffered.
- ◆ As one of the latest generation of Lamson, Acrylic Guard provides a unique product which is suitable for all applications from a single unit installation, to large multiple aisle designs of over one hundred antennas.
